

LYCO®Saver Bypass Valves

- Allows for uninterrupted service of gas during change-out or repair of the meter or regulator.
- Improved safety and usage over conventional methods of purging air from the bypass line.
- Delivers the highest flow capacity with the least amount of pressure drop over other types of devices.
- Eliminates the need for cumbersome rubber bags during gas meter changeouts.
- Eliminates stray gas emissions associated with bag changeouts.
- Eliminates costly relight calls.

Design & Construction

- Unique design allows for either vertical or horizontal installations.
- Durable steel pipe construction, coated with electrostatically applied polyester or zinc plating for corrosion protection.
- Precision ANSI specified malleable fittings and medium density PE internal parts.
- No internal moving parts during continuous service to wear out.
